Description About Project

There are some steps to follow for the project:

1. You will find a dataset for your project, it can be about anything like customers of a company, patients of a hospital, students of a university etc.

2. You will choose an intelligent software for your project. With the help of this software, you will make a data mining operation (classification, clustering, association rules or deviation detection).

3. After that you will write a report about your project. You will have abstract, introduction, materials and methods, results and discussion, and conclusion part. You can submit your report until 20 January 2019.

4. In your report, you will use at least 20 sources, from publications, like books, academic papers etc. In case of any plagiarism founded, your project will be evaluated as zero.

5. You will present your project in the assigned date.
